1 Introduction

1.1 Purpose

The purpose of this document is to present a detailed description of the Volunteer Recruitment System. It will explain the purpose and features of the system, the interfaces of the system and what the system will do. This document is intended for both the stakeholders and the developers of the system.

1.2 Scope of Project

This software system will be a Web Publishing System for a volunteer recruitment. This system will be designed for managers to apply some activities for volunteers to take part in. By participating the volunteer activities, the system will give some integrals to users for applying a high identity. More specifically, this system is designed to allow an manager to manage publish some socially useful activities and courses. Users can participate these activities. Beside, by participating these activities, more integrals will be got for applying a new identity. Different identities have different preferential policies for buying the courses which will be good for users.

1.3 Introduction

The system has two active actors, the user and the manager. Both of them are required to log in before they can access to the system, but only the user can sign up, which suppose the user to complete the personal information. The system can mainly be divided into three parts. First of all, the manager is able to initiate or edit projects that can be generated with QR code and courses, and then the user can enroll his/herself into the projects or the courses that should be paid and checked by the manager. Both of them have the access to view projects and courses lists. Besides, the user has the access to check and edit his/her personal information, as well as to check credit record, member manual, study record and activity record. Another function is that the user can submit application for his/her status. The last part is that the manager has the approach to searching users and viewing users list, users' details and user' credit records. In addition, the manager can also modify user records, identity authentication, edit discount strategy or charge information, as well as add activity records or charge information.

1.4 Glossary

Term	Definition
User	A person who use the system to take part in activities.
Manager	A person who manage the system and in charge of the users.
Credit	Something can be gained after taking part in a activity and after reaching a certain number can upgrade to a new status.
Project	An offline activity that users can take part in, such as volunteering work.
Course	An offline activity that should pay money for, such as having lessons.
Status	A symbol as the user, some activities may decline users that not reach a certain status, which can be upgrade when the credit is enough.
Discount	Some courses have the discount that users can pay less.
Charge information	The information about bank that is used when the user remit for joining a course.

1.5 Overview of Document

The next chapter, the Overall Description section, of this document gives an overview of the functionality of the product. It describes the informal requirements and is used to establish a context for the technical requirements specification in the next chapter. The third chapter, Requirements Specification section, of this document is written primarily for the developers and describes in technical terms the details of the functionality of the product. Both sections of the document describe the same software product in its entirety, but are intended for different audiences and thus use different language. And the last chapter is the database of this project which describes the database tables will be used.

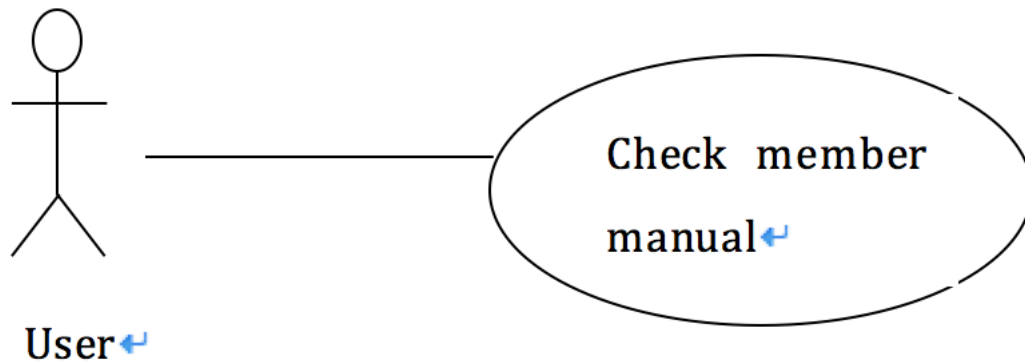

2 Functional Requirements Specification

This section outlines the use cases for each of the active readers separately. The manager and the users are main actors in this system.

2.1 User Use Case

2.1.1 Use case: Check member manual

Diagram:

Brief Description

The User access to his personal page and check his personal information.

Initial Step-By-Step Description

Before this use case can be built, the User has already registered and click on 'personal information' at bottom right.

1. The system presents his personal information.
 2. The User can return to home page anytime.
- Xref: Section 3.1.3, Check personal information

2.1.2 Use case: Check credit record

Diagram:↵

Brief Description

The User access to his personal page, then check credit record.

Initial Step-By-Step Description

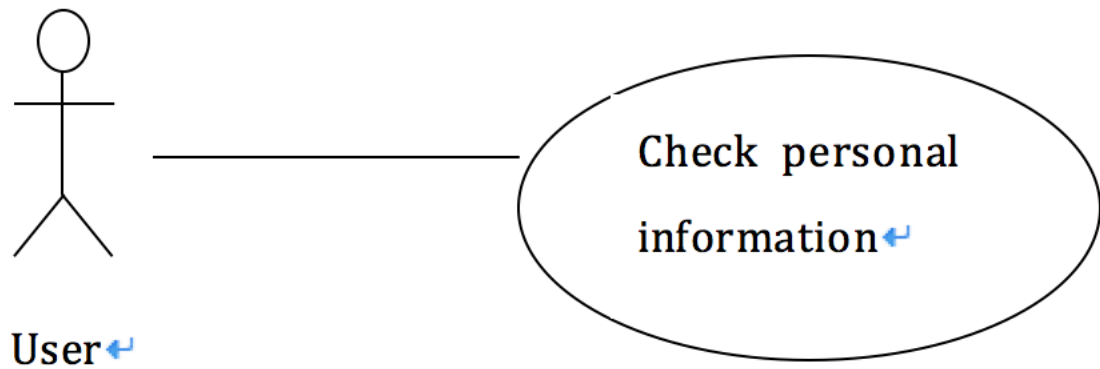

Before this use case can be built, the User has already registered and click on ‘personal information’ at bottom right.

1. The User selects to check credit record.
2. The system presents his credit record every time.
3. The User can return to his personal page anytime.

Xref: Section 3.1.2, Check credit record

2.1.3 Use case: Check personal information

Diagram:↵

↵

Brief Description

The User access to his personal page and check his personal information.

Initial Step-By-Step Description

Before this use case can be built, the User has already registered and click on 'personal information' at bottom right.

1. The system presents his personal information.
 2. The User can return to home page anytime.
- Xref: Section 3.1.3, Check personal information.

2.1.4 Use case: Check activity record

Diagram: ↩

Brief Description

The User access to his personal page and check his activity record.

Initial Step-By-Step Description

Before this use case can be built, the User has already registered and click on 'personal information' at bottom right.

1. The system shows his/her number of activity record.
2. The User selects to 'Activity record'.
3. The system presents his activity record every time, and every record links to activity details.
4. The User can return to his/her personal page anytime.

Xref: Section 3.1.4, Check activity record

2.1.5 Use case: Submit application

Diagram: ↩

Brief Description

If the User want to change his/her status, and he/she has enough credits, then he/she needs to submit his/her statement, and wait for manager review.

Initial Step-By-Step Description

Before this use case can be built, the User has already registered and click on 'personal information' at bottom right.

1. The User selects the 'status request' button.
2. The System shows a text area and a ?submit? button, and prompt User to write down his application.
3. After finish, the User click 'Submit'.

The System shows submit failed or succeeded, if failed, shows reason e.g. score were not enough, and show 'Pending' at the previous ?Submit? button.

Xref: Section 3.1.5, Submit application

2.1.6 Use case: Check study record

Diagram:↵

Brief Description

The User access to his personal page and check his study record.

Initial Step-By-Step Description

Before this use case can be built, the User has already registered and click on ‘personal information’ at bottom right.

1. The system shows his/her number of activity record.
2. The User selects to ‘Study record’.
3. The system presents his/her study record every time, and every record links to details of the class.
4. The User can return to his/her personal page anytime.

Xref: Section 3.1.6, Check study record.

2.1.7 Use case: Attend projects

Diagram:↵

Brief Description

The User logs in the WeChat Volunteering Website, attend projects.

Initial Step-By-Step Description

Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.

1. The User chooses social activities.
2. The System presents the list of projects information.
3. The User chooses a project to attend.
4. The System presents the details of the project.
5. The User presses enroll button.
6. The System enrolls the User in the database if the condition is satisfied.

Xref: Section 3.1.7, Attend projects

2.1.8 Use case: View projects

Diagram: ↩

Brief Description

The User logs in the WeChat Volunteering Website, view projects.

Initial Step-By-Step Description

Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.

1. The User chooses social activities.
2. The System presents the list of projects information.
3. The User chooses a project.
4. The System presents the details of the project to the User.

Xref: Section 3.1.8, View projects

2.1.9 Use case: View Courses

Diagram: ↩

Brief Description

The User logs in the WeChat Volunteering Website, view courses.

Initial Step-By-Step Description

Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website .

1. The User chooses course.
2. The System presents the list of courses information.
3. The User chooses a course.
4. The System presents the details of the course to the User .

Xref: Section 3.1.9, View Courses

2.1.10 Use case: Attend Course

Diagram:↵

↵

Brief Description

The User logs in the WeChat Volunteering Website, attend projects.

Initial Step-By-Step Description

Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.

1. The User chooses course.
2. The system presents s list of courses.
3. The User chooses a course to enroll.
4. The system presents the details of the course.
5. The User presses enroll button.
6. The system presents a box containing a bank account and a button already paid.
7. The User pays the course fee to the account and presses the button already paid.

Xref: Section 3.1.10, Attend Course

2.1.11 Use case: Sign up

Diagram:↵

Brief Description

The user access to the Wechat public number, go to the sign up page and complete the personal information.

Initial Step-By-Step Description

Before the user sign up, he/she needs to follow the Wechat public number with interest.

1. The users choose to complete the member information.
2. The system display the kinds of the information that the user need to fill.
3. The users finish the information filling process.

The system records the user's information and stores it to database.

Xref: Section 3.1.11, Sign up

2.1.12 Use case: Log in

Diagram: ↵

Brief Description

The user goes to the log in page, enter the account and password, check the correctness and log into the system.

Initial Step-By-Step Description

Before the user sign up, he/she needs to sign up an account for logging in.

1. The users choose to log into the system.
 2. The system displays the log in interface and asks the account and password.
 3. The users entering the account and password required for logging in.
 4. The system checks if the account and password are correct.
- The user log into the system successfully or enter the account and password again.
Xref: Section 3.1.12, Log in

2.1.13 Use case: Complete the personal information

This use case is extended by the Sign up.

Diagram: ↩

Brief Description

When the user through the sign up process, he/she needs to complete the five different kinds of information which are name, telephone number, address, birthday and gender.

Initial Step-By-Step Description

Before the user completes the personal information, he/she needs to start the sign up process.

1. The system provides the different kinds of information that want to be filled by user.
2. The user tries to complete the five kinds of information.
3. The system checks if the entering information format is correct.
4. If the information is correct, the user signs up successfully, otherwise the user re-entering the member information.

Xref: Section 3.1.13, Complete the personal information

2.1.14 Use case: Edit the information

Diagram:↵

Brief Description

The user goes to the personal information page, enters the change personal information and completes it.

Initial Step-By-Step Description

Before the user edit, he/she needs to access to the system.

1. The user goes to the personal information page, click the edit link.
2. The system presents the edit interface that the user can change the information.
3. The user changed the information and save it.
4. The system receives the information and save it to the database.

Xref: Section 3.1.14, Edit the information

2.2 Manager Use Case

2.2.1 Use case: Initiate learning and growth

Diagram: ↩

Brief Description

The Manager accesses the Web to publish a new lesson which the users can look through some information about it and sign up for it.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'Learning and Growth'.
2. The system displays the previous lessons has been initiated by Manager.
3. The Manager chooses 'Add new' button.
4. The system displays the details which have to be filled by Manager.
5. The Manager fill in some details about this lesson including theme, start time, end time, address cost and so on.
6. The Manager press the 'Publish' button.
7. The system transfers the lesson information to the website and returns the Manager to the main page of lesson.

Xref: Section 3.1.15, Initiate learning and growth

2.2.2 Use case: Edit learning and growth

Diagram:

Brief Description

The Manager accesses the Web to edit the ‘learning and growth’ part.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to ‘Learning and Growth.
2. The system displays the previous lessons has been initiated by Manager.
3. The Manager chooses one of the initiated lessons and press ‘Edit’ button.
4. The system displays the edit page.
5. The Manager edits some details about this lesson and press the ‘Publish’ button.
6. The system transfers the lesson information to the website and returns the Manager to the main page of lesson.

Xref: Section 3.1.16, Edit learning and growth

2.2.3 Use case: Identity authentication

Diagram:↵

Brief Description

The Manager accesses the Web to audit the users' status application and agree or disagree.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'Identity authentication'.
2. The system displays the application list with applier names, identities, and apply time.
3. The Manager can choose one of the applications.
4. The system displays the detailed personal information and application statement.
5. The Manager will choose 'Agree' or 'Disagree' based on the personal information.
6. The system will put this application into 'Already Audited' page.

Xref: Section 3.1.17, Identity authentication

2.2.4 Use case: Add activity records

Diagram:↵

Brief Description

The Manager accesses the Web to add activity records which describe the details of the activity that has just been completed and all of the users can look through them.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'Activity records'.
 2. The system displays the previous activity records.
 3. The Manager chooses 'Add new' button.
 4. The system displays some details which Manager have to fill in.
 5. The Manager fills in the details and publish the records.
 6. The system transfers records to the website and returns Manager to the main page.
- Xref: Section 3.1.18, Add activity records

2.2.5 Use case: View users list

Diagram:↵

↵

Manager↵

Brief Description

The Manager accesses the Web to view users list which have sign up to the website.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'View users'.
2. The system displays the users list including users' basic information.

Xref: Section 3.1.19, View users list

2.2.6 Use case: Search users

Diagram:↵

Brief Description

The Manager accesses the Web to publish a new lesson which the users can look through some information about it and sign up for it.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'Search users'.
2. The system displays the window of the search.
3. The Manager type user's phone number that want to search.
4. The system displays user information whose phone number is searched.

Xref: Section 3.1.20, Search users

2.2.7 Use case: View users' details

Diagram: ↵

Brief Description

The Manager accesses the Web to view the detailed information of users.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'View users'.
2. The system displays the users list.
3. The Manager can choose one specific user.
4. The system displays the detailed personal information of the user.

Xref: Section 3.1.21, View users? details

2.2.8 Use case: Generate QR Code

Diagram:

Brief Description

The Manager generate QR code before activities start to make volunteers to scan it which can be used as attendance sheet.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the Online Website.

1. The Manager selects to 'View activities'.
2. The system displays the public-spirited activities which are not be held.
3. The Manager can choose 'Generate QR code' button.
4. The system generates the QR code and displays it on the screen.

Xref: Section 3.1.22, Generate QR Code

2.2.9 Use case: Modify user credit

Diagram: ↩

Brief Description

The Manager accesses the management system, searches for a user using phone number and modify his/her credit.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the manager interface and select Credit Management section.

1. The manager types in user's phone number.
2. The system displays the user's name.
3. The manager types in number of credits want to modify.
4. The manager chooses the reason of modification among charity activity, courses and other.
5. The manager confirms modification.
6. The system modify user credit record.

Xref: Section 3.1.23, Modify user credit

2.2.10 Use case: View users' credit records

Diagram: ↵

Brief Description

The manager view a list of record of all credit modification.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the manager interface.

1. The Manager chooses the credit management button.
2. The System shows the list of all credit modification record, sorted by time.
3. The Manager clicks one user's name.
4. The System displays this user's credit modification records.

Xref: Section 3.1.24, View users' credit records

2.2.11 Use case: Add charge information

Diagram: ↩

Manager ↩

Brief Description

The Manager add a charge information into system.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the manager interface.

1. The Manager chooses Finance Management button.
2. The System display current accounts information.
3. The Manager clicks New Account button.
4. The System prompts Manager types in Name, Bank Name, and Account number.
5. The Manager types in information.
6. The Manager clicks Save button.
7. The new account information saved in the system.

Xref: Section 3.1.25, Add charge information

2.2.12 Use case: Update Charge information

Diagram:↵

↵

Brief Description

The Manager edit a charge information in system.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the manager interface.

1. The Manager chooses Finance Management button.
2. The System displays a list current account information.
3. The Manager chooses a current account information and clicks on Edit button.
4. The system presents an input area filling in with the information.
5. The Manager modifies the information and submits the form.
6. The system verifies the information and returns the Manager to current account list page.

Xref: Section 3.1.26, Update Charge information

2.2.13 Use case: Edit Discount Strategy

Diagram: ↵

Brief Description

The Manager add a discount strategy of courses into system.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already accessed the manager interface.

1. The Manager chooses Discount Management button.
2. The System displays current discount information with five different discount number for users with different number of credits, before the first initialization, all numbers are zero.
3. The Manager clicks edit button.
4. The System enable Manager modify five numbers(percentage).
5. The Manager modifies five discount numbers and clicks Save button.
6. The system verifies the information and returns the Manager to Discount Management page.

Xref: Section 3.1.27, Edit Discount Strategy

2.2.14 Use case: Initial projects

Diagram:↵

Brief Description

The Manager logs in the WeChat Volunteering Website, releases the project so that Users can take part in.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already logged in the WeChat Volunteering Website.

1. The Manager chooses social activities.
2. The system presents the list of projects that have finished.
3. The Manager presses add project record.
4. The system shows a new page with empty project information to be completed.
5. The Manager complete the subject, start time, end time, detailed address of the project, the number of volunteers limited, score and identity needed, as well as award.
6. The Manager presses the text area for describing project details.
7. The system presents an input box for typing to the Administer.
8. The Manager presses finish to submit project details including photos and videos.
9. The system returns to the previous page.
10. The Manager presses preview button.
11. The system shows the appearance of the project after submitted.
12. The Manager presses release button.
13. The system releases the project so that Users can take part in.

Xref: Section 3.1.28, Initial projects

2.2.15 Use case: Edit projects

Diagram:↵

Brief Description

The Manager logs in the WeChat Volunteering Website, edit projects.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already logged in the WeChat Volunteering Website.

1. The Manager chooses social activities.
2. The system presents the list of projects.
3. The Manager chooses not started.
4. The system presents the list of projects that have not started yet.
5. The Manager presses edit.
6. The system presents a new page with the details of the project that can be edited.
7. The Manager edits the details he/her want to change and remains others the same as before.
8. The Manager presses preview.
9. The system the appearance of the project after submitted.
10. The Manager presses release button.
11. The system releases the edited project.

Xref: Section 3.1.29, Edit projects

2.2.16 Use case: Check Course Fee

Diagram:↵

Brief Description

The Administer logs in the WeChat Volunteering Website, check course fee and view courses.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already logged in the WeChat Volunteering Website.

1. The Manager chooses course.
2. The System presents the list of courses information.
3. The Manager chooses a course.
4. The System presents the details of the course and the list of Users enrolling in it.
5. The Manager check the fee from the bank.
6. The Manager presses confirm the payment if the fee is received from the volunteer.
7. The System changes the state for the User to already paid.

Xref: Section 3.1.30, Check Course Fee

2.2.17 Use case: View Courses

Diagram: ↩

Brief Description

The Manager logs in the WeChat Volunteering Website, view courses.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already logged in the WeChat Volunteering Website.

1. The Manager chooses course.
2. The System presents the list of courses information.
3. The Manager chooses a course.
4. The System presents the details of the course and the list of Users enrolling in it to the Manager.

Xref: Section 3.1.31, View Courses

2.2.18 Use case: View projects

Diagram: ↵

Brief Description

The Manager logs in the WeChat Volunteering Website, view projects.

Initial Step-By-Step Description

Before this use case can be initiated, the Manager has already logged in the WeChat Volunteering Website.

1. The Manager chooses social activities.
2. The System presents the list of projects information.
3. The Manager chooses a project.
4. The System presents the details of the project and list of Users enrolling in it to the Manager.

Xref: Section 3.1.32, View projects

3 Functional Requirements

3.1 System Requirements

3.1.1 Check member manual

Use Case Name	Check member manual
XRef	Section 2.1.1, Check member manual
Trigger	The Volunteer has selected to check member manual.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1.The system presents the member manual. 2. The Volunteer may return to "personal information" page anytime.
Alternative Paths	None.
Postcondition	The member manual has been displayed.
Exception Paths	The Volunteer may abandon the operation at any time.
Other	None.

3.1.2 Check credit record

Use Case Name	CCheck credit record
XRef	Section 2.1.2, Check credit record
Trigger	The Volunteer has selected to check credit record.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1.The system shows the total number of score. 2.The Volunteer may request to see his each time record. 3.The system presents a list of the volunteer?s score record.
Alternative Paths	None.
Postcondition	The requested information has been displayed.
Exception Paths	The Volunteer may abandon the operation at any time.
Other	None.

3.1.3 Check personal information

Use Case Name	Check personal information
XRef	Section 2.1.3, Check personal information
Trigger	TThe Volunteer has selected to check personal information.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1. The system shows volunteer personal information
Alternative Paths	None.
Postcondition	The requested information has been displayed.
Exception Paths	The Volunteer may abandon the operation at any time.
Other	None.

3.1.4 Check activity record

Use Case Name	Check member manual
XRef	Section 2.1.4, Check activity record
Trigger	The Volunteer has registered, and accessed to 'personal information' page.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1.The system shows the total number of activity that the volunteer has participated. 2.The Volunteer may request to see the full record about his activities. 3. The system presents a list of the volunteer's activity record, and every record links to its activity details.
Alternative Paths	None.
Postcondition	The requested information has been displayed.
Exception Paths	The Volunteer may abandon the operation at any time.
Other	None.

3.1.5 Check submit application

Use Case Name	Check submit application
XRef	Section 2.1.5, Check submit application
Trigger	The Volunteer has selected to status request.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1.The system shows a text area and a "submit" button. 2.The Volunteer need to write down his application, and click "submit". 3.The system presents ?submit fail? if the volunteer credits is not enough, or "submit succeed". 4. If submit succeed, the system will show "Pending" at previous ?Submit? button.
Alternative Paths	None.
Postcondition	The application has been submitted.
Exception Paths	1. The Volunteer may abandon the operation at any time. 2. The Volunteer may not write down any word. 3. The Volunteer may leave before submitting.
Other	None.

3.1.6 Check study record

Use Case Name	Check study record
XRef	Section 2.1.6, Check study record
Trigger	The Volunteer has selected to check study record.
Precondition	The Volunteer has registered, and accessed to "personal information" page.
Basic Path	1. The system shows the total number of study record that the volunteer has participated. 2. The Volunteer may request to see the whole record about his study. 3. The system presents a list of the volunteer's study record, and every record links to its class details.
Alternative Paths	None.
Postcondition	The requested information has been displayed.
Exception Paths	The Volunteer may abandon the operation at any time.
Other	None.

3.1.7 Attend projects

Use Case Name	Attend projects
XRef	Section 2.1.7, Attend projects
Trigger	Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.
Precondition	The User has accessed to the user's homepage.
Basic Path	1. The User chooses social activities. 2. The System presents the list of projects information. 3. The User chooses a project to attend. 4. The System presents the details of the project. 5. The User presses enroll button. 6. The System enrolls the volunteer in the database if the condition is satisfied.
Alternative Paths	In step 5, if the User chooses preview: 1. The system displays the previous page.
Postcondition	The User is added to the project in the database.
Exception Paths	The User may abandon enrollment at any time.
Other	None.

3.1.8 View projects

Use Case Name	View projects
XRef	Section 2.1.8, View projects
Trigger	Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.
Precondition	The User has accessed to the manager?s homepage.
Basic Path	1.The User chooses social activities. 2.The System presents the list of projects information. 3.The User chooses a project. 4.The System presents the details of the project to the User.
Alternative Paths	In step 3, if the User wants to see other parts: 1. The User chooses preview. 2. The system presents the previous page.
Postcondition	The project? detailed information is presented.
Exception Paths	The User may abandon viewing at any time.
Other	None.

3.1.9 View Courses

Use Case Name	View Courses
XRef	Section 2.1.9, View Courses
Trigger	Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.
Precondition	The User has accessed to the manager?s homepage.
Basic Path	1. The User chooses course. 2. The System presents the list of courses information. 3. The User chooses a course. 4. The System presents the details of the course to the User .
Alternative Paths	In step 3, if the User wants to see other parts: 1. The User chooses preview. 2. The system presents the previous page.
Postcondition	The course? detailed information is presented.
Exception Paths	The User may abandon viewing at any time.
Other	None.

3.1.10 Attend Course

Use Case Name	Attend Course
XRef	Section 2.1.10, Attend Course
Trigger	Before this use case can be initiated, the User has already logged in the WeChat Volunteering Website.
Precondition	The User has accessed to the user's homepage.
Basic Path	<ol style="list-style-type: none">1. The User chooses course.2. The system presents s list of courses.3. The User chooses a course to enroll.4. The system presents the details of the course.5. The User presses enroll button.6. The system presents a box containing a bank account and a button already paid.7.
